

# Global net is the watchword for enterprises of any size

When it comes to communicating with your branches, with your partners or to controlling the supply chain, being able to provide real-time data exchange independent of physical distance is absolutely necessary.

Most times the geographic coverage and the performances provided by terrestrial networks are good. However, still many places are not reached by cable. Skylogic's Satellite broadband services fully cover more than 150 countries. A quick deployment of our cost-effective Broadcasting, Maritime, Transportable, Disaster Recovery, Mission Critical services is guaranteed. These services operate under Internet Protocol and support all typical IP applications.

**Skylogic**  
a eutelsat company

# Complement your terrestrial networks with Skylogic

**Skylogic** provides satellite connectivity and flexible, personalized solutions to enterprises.

Thanks to the capacity of Eutelsat's fleet, it supplies cutting-edge broadband services with excellent upload/download speeds which allow for safe and reliable data transmission regardless of geographic boundaries. SkyPark, Skylogic's teleport, guarantees signal delivery via satellite and is redundantly connected with fibre to more 70 POP's in the 4 continents, providing secure information-sharing worldwide and reaching any terminal connected to the Internet.

The D-STAR terminal and its small satellite dish will guarantee the quick deployment of your LAN on the net, regardless of your position.

## A full portfolio of services

Internet Access, Connectivity, Private Networks, Single Channel Per Carrier, Trunking, Transportable, Virtual Network Operator and Maritime services are standard products. Skylogic and its certified partners can offer several turnkey projects.

## Internet applications

The high quality provided by bi-directional satellite connection gives access to a series of Value Added Services, such as VOIP, video-conference between branches, telemetry of remote industrial plants, remote monitoring of critical areas, distance personnel training, heavy data broadcasting also through VPN (Virtual Private Network).
