

IP CONNECT

TAILORED CONNECTIVITY FOR BUSINESS APPLICATIONS

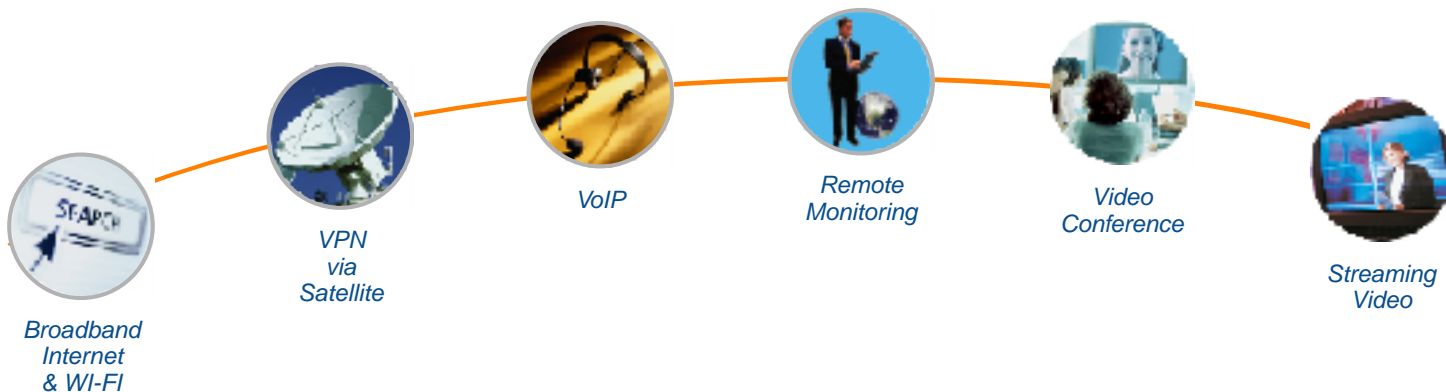

Skylogic
a eutelsat company

Remove boundaries from your business communications

Connect is a flexible and high-performance satellite solution offering fully customised and dedicated bandwidth to service enterprise sites or to create virtual private networks. With the CONNECT solution it is possible to: design a highly personalised bandwidth, adapted to specific project needs. Satellite broadcasting capacity can also make it possible to send the same content to several users simultaneously, thus drastically reducing transmission costs.

Serving a wide range of business applications

 Surfing the net, e-mails, access to company databases and file transfer : Internet via satellite is fast and reliable and is the perfect alternative whenever broadband connectivity on terrestrial networks is not available.

 Greater security for private information sharing. Using a satellite VPN (virtual Private Network), businesses are able to easily extend the boundaries of their internal communication networks to the most remote places around the world to create a secure, low-cost interface with any office, supplier or client.

 Via satellite, it is also possible to make a voice call or video conferencing and reach all your operations centres at marginal additional cost.

 Distribute files or streaming content to multiple sites efficiently, or collect data from a wide coverage area to a central point for monitoring and data processing.

Tailored to customer's needs :

The service is tailored to customers' needs and capacity requirements, providing dedicated capacity typically from 64 kbps up to 1024 kbps for transmit and from 64 kbps up to 8 Megabit/s for receive. The main advantage of IP Connect is its flexibility. Customers can define their own contention ratio and quality of service parameters for sub-groups within capacity contract purchased. Prioritization can also be done by protocol, IP address, etc.

Example of an IP connect contract (800 Kbit/s)

Key Benefits

- Available almost worldwide
- Rapid deployment
- Flexible use of satellite bandwidth
- High-level backbone connectivity

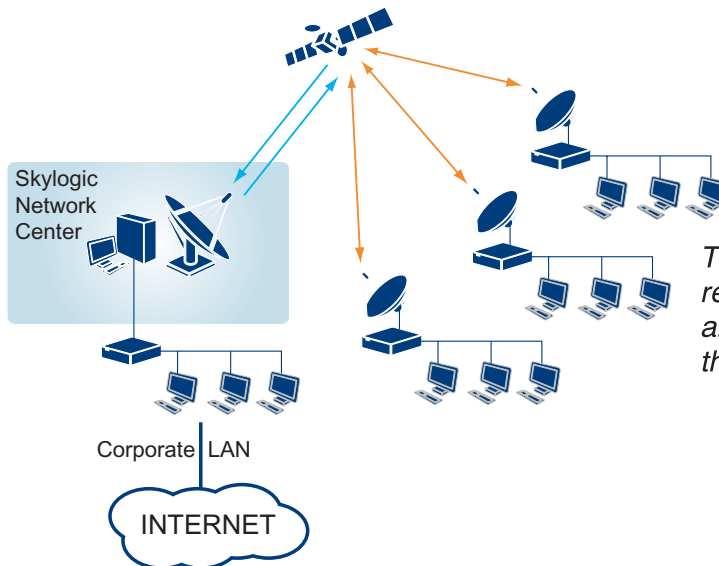

Broadband for everyone

Internet access and interconnection over long distances, virtual private networks, multi-site videoconferences and datacasting : Thanks to D-Star, the digital divide is no longer a problem. With D-Star it is possible to receive and transmit from any location, without the need for a terrestrial line.

Used, in combination with other technologies such as Wi-Fi, PLC, etc., it is possible to obtain global/regional coverage combined with local community access.

How does it work ?

The Skylogic network center manages the information flow between groups of terminals

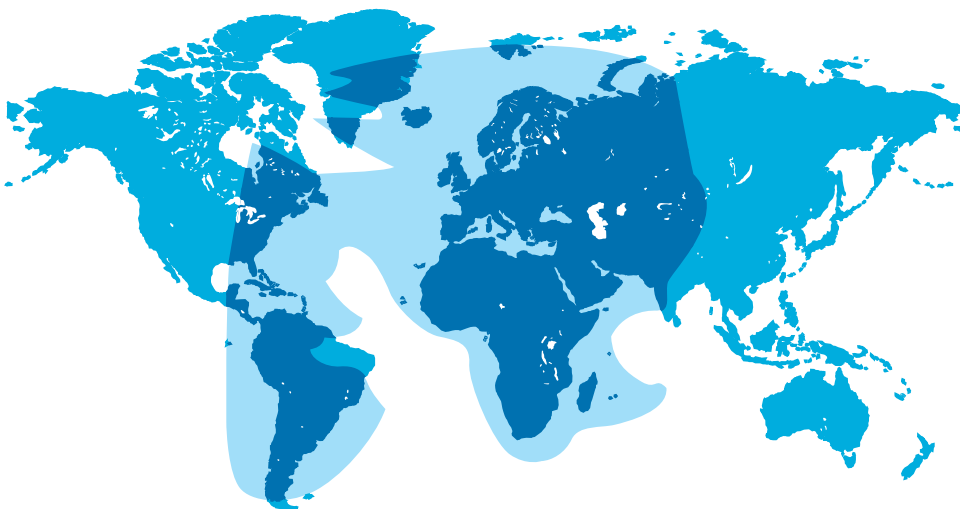

The remote locations receive data and send a reply, thus closing the circle

Network management Center

The Network Management center at Skylogic's headquarters monitors and controls on a 24-hours basis, 7 days a week, the quality of the IP traffic on the platforms.

The guarantee of :

- Availability
- Uniform quality of service
- Customer support

Service coverage

Thanks to Skylogic's extended satellite network, the Connect solution is available almost worldwide via a network of approved sales channel partners and integrators.
