

# SkyPark

A technological park in Turin

Bi-directional IP transmissions via satellite:  
the solution to all your problems

# Sky Park

**SkyPark is one of the largest platforms in the world situated in the new Skylogic teleport**

Providing bidirectional, broadband IP (Internet Protocol) communications and value-added television services, SkyPark is managed by a highly specialised team working 24 hours a day and 7 days a week. Its task is to give a professional support for controlling the entire network, assigning band and regulating the quality of the service. The principal markets of reference are small and medium-sized businesses, large industrial concerns and the Public Administration.

**From SkyPark we reach and link four continents**

An important investment, a year-long industrial renewal project to convert the ex Telecom area

## Tailer-made solutions

Videotelephony

Maritime services

TV Platforms

An area of 10,000 sq.m

15 parabolic antennas connected to Eutelsat satellites

A staff of 35 engineers, specialised technicians and office personnel

## Business services

- **Broadband Internet and Sat-Wi-Fi**  
> for high speed local networks anywhere, without the need for excavation and cabling
- **Satellite VPN's (Virtual Private Networks)**  
> for secure information-sharing in business intranets, and even in the most remote, difficult-to-reach locations
- **VoIP telephony**  
> via satellite, at low cost, to all your operating units
- **Telemetry and remote control of industrial installations**  
> for evaluation, adjustment or restoring operation of remote machinery. And also applications in Formula 1 with the Renault team
- **Videoconferences and e-learning**  
> for a simultaneous interface with your partners, from any site, at no extra cost
- **Video-streaming**  
> for television programs and business TV on the company PC

Teleport connections

Videoconferencing

Bidirectional connection

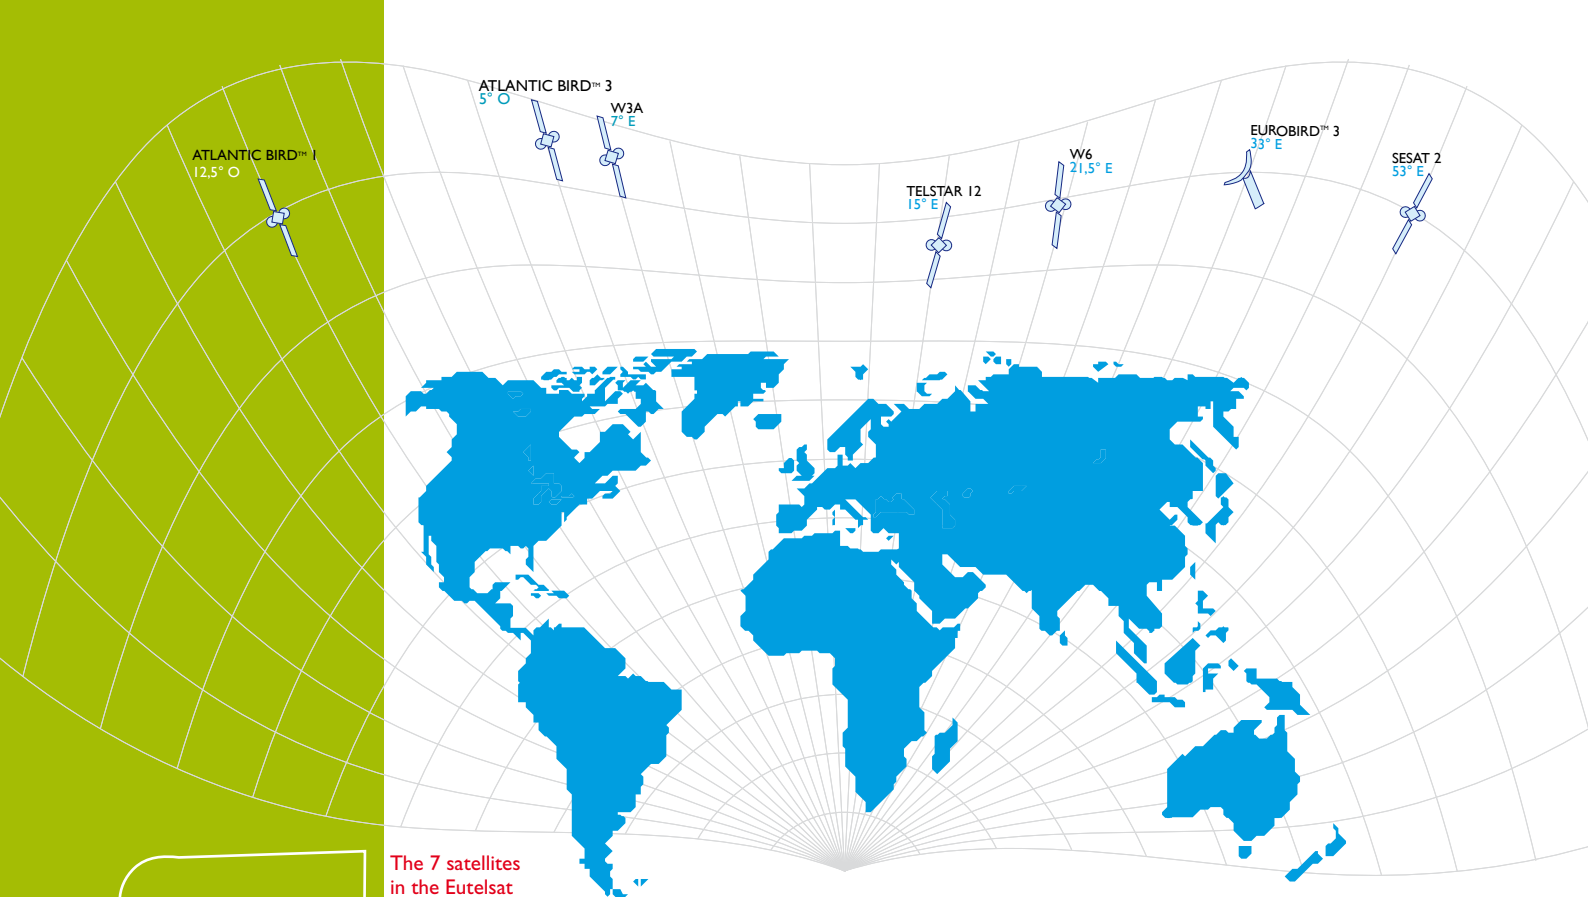

## Market applications

- **Business networks**
  - > For connectivity to remote offices that are not reached by the fixed network
- **Rescue services or extreme situations**
  - > To guarantee or restore communications.  
Examples of applications: the Adamello glaciers, off-shore oil platforms, fly-away in the desert, areas hit by the tsunami in Sri Lanka
- **Public Administration**
  - > For access via Internet to public services, without leaving the office
- **Communication services for mobility**
  - > Access to Internet and to corporate networks, data updates and transmission for communications by road, sea and air

Connections anywhere with Skylogic technology, from mountains to deserts

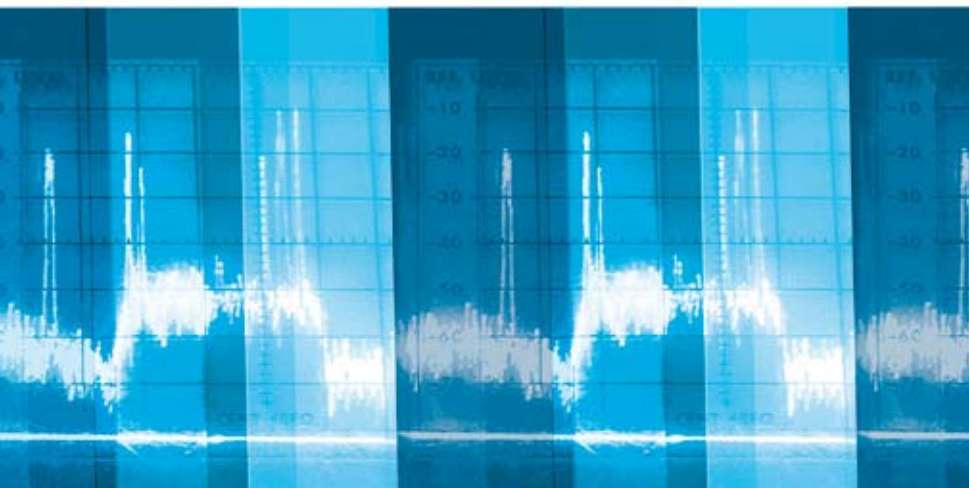

The 7 satellites in the Eutelsat fleet, to which the parabolic antennas in the SkyPark are currently connected

## Company profile

Skylogic specialises in broadband satellite communication services: it is located in Turin and is a fully owned subsidiary of Eutelsat, one of the three world leaders in satellite telecommunication technologies with 24 orbiting satellites covering over 150 nations to reach 90% of the world's population, from the Americas to the Pacific area. Its satellites are used to broadcast 2.100 television channels and 970 radio stations, to reach 120 million houses via cable and satellite. In addition to the video-broadcasting services, Eutelsat also provides a vast range of fixed and mobile telecommunications services and a significant number of broadband applications for terrestrial and mobile communications. Nevertheless, via the multimedia platforms in France and in Turin, it is also able to serve businesses, local communities, the Public Administration and humanitarian agencies and organisations in Europe, Africa, Asia and the Americas.

Skylogic satellite networks are linked with the optic fibre of the leading operators in the sector to reach Europe, the Mediterranean area, the Middle East, North Africa and the Americas
